

GT1 Mobile Entry Pedestal

World's Most Versatile Entry Pedestal for Access Control

As the leading provider of ticket-reading scanners in live entertainment, Janam has unmatched experience marrying inventive concepts with state-of-the-art technology to improve venue operations and enhance the patron experience. GT1 is the first entry pedestal in Janam's game-changing line of Guardian access control solutions and is designed to provide rapid, reliable and secure barrier-free entry to sports stadiums, arenas, theaters, aquariums, museums, multi-purpose facilities and other live entertainment and hospitality venues.

Janam's GT1 is a fully-featured mobile pedestal that is powered by a Janam XT2+ or XT3 handheld computer that is easily inserted into (and removed from) the top portion of the unit. With GT1, venues can affordably deploy the same proven access system that is already in use, in either handheld or mobile pedestal format, depending on their specific needs. Janam's GT1 replaces ridiculously expensive hardware with standalone software running on a different and redundant computing platform. Portable and easy to move, GT1 is designed for indoor and typical outdoor environments where venue operators want to provide patrons with the ability to self-certify their entry credentials, while freeing up ticket takers to perform other valuable tasks and better engage with patrons and fans.

Winning Features:

- Compact, flexible and modular design
- NFC "tap-and-go" technology
- Contactless ticketing via Apple Wallet and Google SmartTap
- High-throughput barcode scanning for printed and mobile credentials
- Integration with virtually all third-party ticketing software
- Bright touchscreen display
- Proven experience in the most challenging venue access environments
- Dual-band Wi-Fi, Bluetooth 5.0 (BLE)
- High-capacity battery for extended-shift usage in mobile pedestal format
- 12 month warranty

In addition to robust barcode scanning of both paper tickets and phone screens, the Janam mobile computing devices that power the GT1 mobile pedestal are the only mobile computers in the industry that support the most advanced “tap-and-go” NFC features of Apple Wallet and Google Pay in the same device, enabling guests to quickly self-validate their credentials before entry. When loaded with a Janam mobile computer, GT1 supports Value Added Services (VAS) and Enhanced Contactless Polling (ECP) protocols for Apple Wallet, as well as SmartTap protocols for Google Pay, enabling secure and frictionless transactions via the digital wallet in customers’ smartphones. Patrons no longer need to scroll through their digital wallet to find the right ticket or pre-activate a ticket using their thumb print. They can now simply tap their iPhone, Apple Watch or Android-powered smartphone on the surface of GT1, and GT1’s integrated proximity-based NFC technology automatically pulls the appropriate pass, enabling venue operators to quickly usher patrons into an event.

Providing more than 20 hours of continuous operation on a single charge, GT1 delivers more power than any other entry pedestal for venue access. The mobile computer powering GT1 comes with advanced Wi-Fi technology that delivers the same reliable and uninterrupted connectivity that venues experience today, while multi-colored, highly-visible LED lights on all sides of the device and full-volume audio alerts allow venue staff to easily confirm credential status from a distance.

In addition to the pedestal form factor, Janam’s GT1 will soon be available in other form factors that target tap-and-go venue entry and other modes of self-certification.

Target Markets Include:

- Stadium and Venue Entry
- Student Access and Security
- Airport Security and Boarding
- Hospital Registration
- Pharmacy Pick-up
- Hotel Check-in / Room Access
- Public Transportation
- Retail Loyalty and Gift Cards
